

Every yacht is carefully inspected and measured before being lifted aboard, and our people, follow all well practiced operating procedure.
All yachts are properly secured after loading for the intended ocean passage.

We have come up with our own transport cradle system, which secures and locks your yacht in place, once the yacht is loaded onto the carrier.

These high precision cradles are engineered for securing yachts up to 200 tons in weight and safely support boats of up to 180 feet!

Once underway, these high strength cradles hold their charge in every sea

and can be shipped to and from every loadport in standard containers and are easily adjusted to every boat hull shape! We are able to rent our yacht shipping cradles for boat transports and occasional specialized equipment such as flat rack and open top containers on certain routings.

Also all lashing and securing material is available for safely transport all yachts for global boat transports and break bulk equipment!

We look forward to your transport enquiries!
